

**CONTROLLING INFECTIOUS RISK:
OUR EXPERTISE SINCE 1957**

SECTOR CATALOGUE: HOSPITALS & CLINICS

WHO ARE WE?

Laboratoire Huckert's International, **a family company**, develops, manufactures and markets unique, **100% safe**, high-performance disinfectants and cosmetics, for use in all your cleaning and disinfection processes.

Our laboratory's success centres around the quality and technicality of our products, our dynamic teams and a subtle balance between **fine chemistry and the power of plants**.

WHY DISINFECT?

WHY DISINFECT?

At the right temperature and in the presence of nutrients, microorganisms replicate every 20 minutes. Thus, a tiny quantity of pathogenic germs from a contaminated source may cause fungal, viral or bacterial cross-contamination and cause an infection.

It is essential to eliminate any risk of contamination with effective and controlled washing and disinfection procedures before each operation. Only meticulous control can guarantee professional safety.

DID YOU KNOW?

A hazardous product does not mean an effective product: There are a number of **European standards** to help you measure the effectiveness of your product. Test conditions must be as close as possible to actual conditions of use, and go beyond basic efficacy tests in suspension (in liquid phase).

“We thoroughly disinfect only what is clean”: **alcohol, bleach, peracetic acid, hydrogen peroxide, caustic soda** or many disinfectants that have **no detergent properties**. Their disinfection performance is affected by the presence of protein contamination or other interferents and by their temperature of use.

OUR MISSION

Expert in high-level bio-decontamination and disinfection. Our mission is to provide faultless disinfection for the entire pathogenic flora, including in conditions of interferences (**bacteria, yeasts, fungi, mycobacteria, spores, naked and enveloped viruses**) without causing undesirable side effects.

“Don't replace a biological risk with a chemical hazard”

OPERATOR

✓ **FORMULA FREE FROM**
→ CMR SUBSTANCES
→ ENDOCRINE DISRUPTORS

We have always been committed to manufacturing and controlling our Biocides according to the same requirements as our Medical Devices. All of our biocides comply with the European Biocide Regulation No 528/2012.

OUR ENVIRONMENTAL COMMITMENT

Sustainable development is an integral part of our laboratory's quality management system.

Above all, we encourage our employees to adhere to our **Family Company Values. Quality, health and ethics are at the heart of all our activities.**

From ensuring our products are non-toxic for the OPEE (Operator, Personnel, Equipment, Environment) to reducing our environmental impact as required by our business.

In order to control environmental risks, we follow the **path of continuous improvement** because nothing can ever be taken for granted. We **analyse, assess, calculate and improve our impact on the environment.**

- ✓ **No environmentally toxic or hazardous waste** during the manufacturing process of our products.
- ✓ **Environmentally friendly.**
- ✓ Formulations enriched with **essential oils** and concentrated extracts from **medicinal plants.**
- ✓ “Cold disinfection” for **quick and easy action.**
- ✓ Ready-to-use sprays **with no propellant gas.**
- ✓ A **wide range** of concentrated products.
- ✓ Packages made from **green PE*** with a **carbon negative footprint**, and fully **recyclable.**
- ✓ A contribution towards **recycled-waste processing.**
- ✓ “ECONOMATIC” **economical automatic** mixing and dosage systems.
- ✓ Constant, traceable quality.

✓ FORMULA FREE FROM
→ CMR SUBSTANCES
→ ENDOCRINE DISRUPTORS

A DISINFECTANT SUITABLE TO YOUR EVERY NEED

It took 38 attempts to obtain the formula combining **performance, speed, stability and neutral pH.**

The formulation of UMONIUM³⁸ offers a significantly wider spectrum of activity. **Contact times are short and realistic. Usage concentrations are low.** The formula surface activity means it has a **powerful action** for cleaning and high-level disinfection, and it removes greasy film, protein film and biofilm, through soaking, water circulation, wet wiping, spraying, foam spraying... Whether cold or hot.

Isopropyl-Tridecyl-Dimethyl Ammonium

A NEW CERTIFICATION FOR OUR MEDICAL DEVICES

Laboratoire Huckert's International is in the process of obtaining **MDR regulation (EU) 2017/745 certification** relating to medical devices. It covers a wider scope of products compared to Directive 93/42/EEC and includes new classification rules. Major improvements required by the new regulation include:

- ✓ Enhanced compliance assessment (clinical assessment)
- ✓ Increased post-marketing follow-up
- ✓ Better traceability of products following the implementation of "UDI" (unique device identifier) codes
- ✓ Enhanced risk management
- ✓ Increased transparency with the introduction of European platform "EUDAMED"

Compliance with this **new regulation** of the quality system for Laboratoire Huckert's International is the guarantee of excellence for all our products for the treatment of your medical devices.

SUPPORTING YOUR BUSINESS SECTOR

Our solutions provide better performance and safety; To simplify the procedures within services and to meet all needs up to sterilisation with products completely safe for the operators, suitable for the most fragile patients, without accelerating wear for the most sensitive equipment, and in compliance with an environmental approach

RETHINKING THE PURCHASING POLICY

Now more than ever, the economic climate obviously makes it necessary to optimise the purchasing policy, and the equation becomes more delicate when the primary issue associated with it involves the quality of care;

Line management quickly shows its limitations with an operation as complex as a hospital or a clinic; Extensive savings are made throughout the healthcare chain, and in the face of increasing risks from healthcare-associated infections (HAI) related to multi-resistance issues and the costs they represent, it becomes imperative to focus on improving hygiene procedures.

The use of safe EFFECTIVE products promotes the prevention and control of infections, improves working conditions and preserves equipment, ultimately leading to significant savings.

IMPROVING AND ADAPTING HYGIENE PROCEDURES

In a sector as sensitive and ever-changing as healthcare, it becomes necessary to question the effectiveness, adequacy and qualitative impact on the provision of care, including disinfection products used on a daily basis.

A warning should be given regarding the chemical hazards of certain products, both for the operator and the most fragile patients as well as sensitive equipment. The act of cleaning and disinfection must be well thought out, safe, effective and suitable for the specificities and issues of the services and equipment.

DON'T REPLACE A BIOLOGICAL HAZARD WITH A CHEMICAL RISK

OPERATING INSTRUMENTATION AND MEDICAL DEVICES

The quality of instrumentation and medical device treatment is one of the most critical points in terms of infectious risk, and must not be compromised.

Whether it is temperature-sensitive equipment that cannot be autoclaved or heat-resistant devices, the cleaning and pre-disinfection step is an essential step that directly impacts all of the disinfection process, and can be the source of biofilm development.

Beyond their remarkable disinfection performance, the use of UMONIUM[®] products optimises all of the treatment of medical devices and offers a safe alternative to using enzymatic, acid and alkaline products.

HAND HYGIENE

80% of infections acquired during medical care originate from the hands; We all agree on the importance of hand hygiene, and in fact, the slightest discomfort should only be tolerated when using a gel.

The formulation of common gels dries the skin, and can lead to the development of dermatological disorders: dermatitis, allergies, eczema, which can result in tearing of the epidermal tissue, the appearance of cracks and the rejection of the solution by the staff; The stickiness associated with the use of glycerine is also a regularly reported problem.

PERFORMANCE AND COMFORT: NOT ALL GELS ARE EQUAL

Our 100% natural, hydroalcoholic gels PHYTOGEL by HUCKERT'S[®] **sanitizer** and PHYTOGEL by HUCKERT'S[®] **genesis** meet surgical standards and ensure a prolonged effectiveness of 3 hours while maintaining the softness and suppleness of the skin. External studies have shown a better staff adherence to disinfection and a longer retention of their performance.

OUR SOLUTIONS TO SUIT YOUR LINE OF BUSINESS

UMONIUM³⁸
MASTER

TP2 biocide

FLOOR

Derived from **fine chemistry**, our biocide range **with essential oils** ensures a **high-level disinfection** with **short contact** times, **simple procedures** and **economical dosages**. Complies with the **new European Biocide Regulation No 528/2012**, which is perfectly suited for the daily use of professional surfaces and equipment.

Detergents - disinfectants - degreasers, our products are **stable, pH-neutral, safe** (non-flammable, with no risk of corrosion, burning or toxic vapours) and **free from CMR components and endocrine disruptors**. They are **effective on all pathogenic flora**, meet the highest **European standards** and leave **no residue after rinsing**.

HAND HYGIENE

As our most used tool, hands are the highest vectors for the transmission of microorganisms. As a result, their hygiene plays an essential role in the control of infection risks.

However, repeated use of soaps and hydroalcoholic solutions can cause skin dryness and may lead to dermatological disorders: such as dermatitis, allergies or eczema.

PHYTOGEL By HUCKERT'S® offers ranges enriched with essential oils that respect your skin, even if dry, ensuring impeccable hygiene.

HYDROALCOHOLIC GEL

ENRICHED WITH
EMOLLIENT AGENTS

PHYTOGEL By HUCKERT'S® **sanitizer**, enriched with thyme, chamomile and eucalyptus essential oils and PHYTOGEL By HUCKERT'S® **genesis**, enriched with emollient agents, deeply hydrate while guaranteeing a hygienic and surgical-grade disinfection.

In addition, they have a non-sticky texture that causes no discomfort when wearing gloves, and leaves no residue feeling even after numerous applications.

SURGICAL
